Business Requirements Document (BRD)

Project Name

Hi Ecommerce – E-Commerce Product Return Management System

1. Document Information

Item	Details
Document Name	Business Requirements Document
Project Name	Hi Ecommerce
Project Type	IT Business Analyst Portfolio Project
Project Methodology	Agile Scrum
Version	1.0
Status	Draft
Prepared By	Business Analyst
Company	Hi Ecommerce (Fictional Business)

2. Executive Summary

Hi Ecommerce is an e-commerce business that wants to improve its product return management process.

Product returns can create additional operational costs, affect customer satisfaction, and increase the workload of customer support teams.

The proposed Return Management System will provide customers with a simple way to check product return eligibility, submit return requests, upload supporting images, and track their requests.

The longer-term project vision also includes analysing return patterns to identify opportunities to reduce avoidable product returns.

3. Business Problem Statement

The existing return process is assumed to have challenges such as:

- Customers may not clearly understand product return eligibility.
- Return requests may require manual handling.
- Customers may have difficulty checking their return request status.
- Return reasons may not be recorded consistently.

- Management may lack a consolidated view of return trends.

These are project assumptions that will be validated as part of the portfolio exercise.

4. Business Objectives

The project aims to:

1. Simplify the product return request process.
2. Improve customer experience.
3. Reduce manual effort in return request handling.
4. Provide transparent return request status information.
5. Capture structured return reasons.
6. Support future analysis of product return patterns.
7. Identify opportunities to reduce avoidable product returns.

5. Project Scope

In Scope

- Customer login and order history access.
- Products return eligibility checking.
- Return reason selection.
- Return request submission.
- Supporting image upload where required.
- Unique return request ID generation.
- Return request confirmation.
- Return request history and details.
- Return request status visibility.
- Return data reporting in a future project phase.

Out of Scope (Initial Release)

- Actual payment gateway integration.
- Automated refund processing.
- Logistics and courier integration.
- AI-based return prediction.
- Automatic product quality inspection.
- Live integration with a real e-commerce platform.

6. Stakeholders

Stakeholder	Responsibility
Customer	Submit and view return requests
Customer Support Team	Assist customers with return queries
Return Management Team	Review return requests
Business Manager	Define business policies and objectives
Product Owner	Prioritise project requirements
Scrum Master	Support Agile delivery
Business Analyst	Gather and document requirements
Development Team	Build the proposed solution
QA Tester	Test system functionality

7. High-Level Business Requirements

Requirement ID	Business Requirement	Priority
BR-01	Customers must be able to view their purchased products.	High
BR-02	Customers must be able to check product return eligibility.	High
BR-03	Customers must be able to select a return reason.	High
BR-04	Customers must be able to submit return requests.	High
BR-05	Customers must be able to upload supporting images where required.	Medium
BR-06	The system must generate a unique return request ID.	High
BR-07	Customers must receive return request confirmation.	High
BR-08	Customers must be able to view return request details and status.	High
BR-09	The business must be able to analyse return reasons and trends in a future phase.	Medium

8. Business Process Overview

Proposed Process

1. Customer logs into Hi Ecommerce.
2. Customer opens order history.
3. Customer selects a purchased product.
4. System checks return eligibility.
5. Customer selects a return reason.
6. Customer uploads images if required.
7. Customer submits the return request.
8. System generates a unique request ID.

9. Customer receives confirmation.
10. Customer views the return request details and status.

9. Business Rules

1. Only authenticated customers can submit return requests.
2. Customers can request returns only for eligible purchased products.
3. Return eligibility must follow the business-approved return policy.
4. A return reason must be selected before submission.
5. Supporting images must be provided when required by the applicable policy.
6. Each successful return request must have a unique reference ID.
7. Customers must only be able to access their own return requests.

Note: The return window, eligible categories, image requirements, and exceptions must be confirmed with business stakeholders before implementation.

10. Success Criteria

The project will be evaluated against the following proposed measures:

- Customers can successfully submit eligible return requests.
- The system validates return eligibility correctly against approved rules.
- Every successful request receives a unique reference ID.
- Customers can view their request details and status.
- Return reasons are stored in a structured format.
- Test cases demonstrate that the agreed requirements are working.

Quantitative performance targets will be established after a baseline and stakeholder expectations are defined.

11. Assumptions

- Hi Ecommerce is a fictional e-commerce company created for this portfolio project.
- Synthetic data will be used for analysis.
- Customers have registered accounts.
- Orders and purchased products are available in the proposed system.
- Business stakeholders will provide the return policy.
- The solution will initially be demonstrated as a prototype or simulated system.

12. Constraints

- No real Hi Ecommerce production system is available.
- No real customer information will be used.
- Payment and courier integrations are outside the initial release.

- Project analysis will use sample data.
- Development and testing will be performed as a portfolio simulation.

13. Risks

Risk	Potential Impact	Mitigation
Unclear return policy	Incorrect eligibility decisions	Confirm business rules
Incomplete requirements	Rework during development	Conduct requirement reviews
Invalid image uploads	Failed return submissions	Define file validation rules
Incorrect request status	Customer confusion	Test status updates
Incomplete sample data	Misleading analysis	Validate synthetic data

14. Project Deliverables

1. Business Requirements Document (BRD)
2. Functional Requirements Document (FRD)
3. As-Is and To-Be process flows
4. Use Case Diagram
5. User Stories and Acceptance Criteria
6. Jira Product Backlog and Sprint Plan
7. Test Cases and UAT Document
8. Synthetic Return Dataset
9. Excel Data Analysis
10. Power BI Dashboard
11. Final Project Report

15. Approval and Sign-Off

Role	Name	Status
Business Sponsor	To be assigned	Pending
Product Owner	To be assigned	Pending
Business Analyst	Portfolio Project Author	Drafted

Document Status: Draft – For Portfolio Demonstration
